Escalation Chain of Authority Involving Patient Care, PCS-38

PURPOSE:

St. Joseph Hospital (SJH) is committed to providing safe, quality patient care. Members of the healthcare team are obligated to work toward resolution of identified real and potential problems within the system that may affect patient care. If the member is unable to resolve such issues independently, the team member is obligated to present the issue in a timely manner to successively higher levels of command until a satisfactory resolution is achieved.

"Chain of Command in healthcare refers to an authoritative structure established to resolve administrative, clinical, or other patient safety issue by allowing healthcare clinicians to present an issue of concern through the lines of authority until a resolution is reached."

SCOPE:

Situations in which, Risk Reduction Strategies have not resolved the immediate concern or need. Risk Reduction Strategies that have an impact on decreasing the need to initiate the COC. Strategies include but are not limited to:

1. Training of key personnel in conflict resolution techniques
2. Talking directly with the staff member or provider at the time of concern in a discrete area away from the patient's bedside.
3. Arrange for support during discussion with the staff member or provider
4. Review of policy or procedure with staff member or provider
5. Just in time education, as appropriate

POLICY:

- **Initiation of the Chain of Command (COC)** is an administrative method that is in place to resolve clinical patient care issues.
- All escalations in COC will be documented through our event management system.
- Examples include but are not limited to:
 1. Conflict related to patient care concerns and/or needs.
 2. Refusal to adhere to established policies or procedures.
 3. Delayed response of a provider to a nurses request to meet a patient care need.
 4. Impairment of a coworker- see [Fitness for Duty ,HR -55](#)
 5. Disruptive behavior of staff member or medical provider
 6. Communication issues that interfere with patient and family care. Examples of barriers to communication include:
 - Complexity of care
 - Clinical responsibility
 - Language difference
 - Generational issue
 - Personal values and expectation
 - Personal difference
 - Disruptive or escalation behavior
- **Initiating the COC involves:**
 1. When a team member is aware of a potential or actual issue, the team member is accountable for:
 - a. Making attempts to prevent or resolve the issue (within their scope of responsibility) through risk reduction strategies.
 - b. If unresolved, the team member shall contact their immediate supervisor and/or Charge Nurse to alert them to the potential or actual issue.
 - c. If still unresolved, the team member shall notify the next level of command (e.g. manager/director) during regular business hours or the Nursing Supervisor after business hours. The Nursing Supervisor can be reached on pager at (603) 402-8010 or via a Communication Specialist.
 - d. If unable to resolve, the Nursing Supervisor shall contact the Administrator on Call (AOC) for resolution of the issue who can be reached via a Communication Specialist.
 - i. The Nursing Supervisor will have a list of all AOC approved leaders and their direct contact information.
 - e. If the issue continues to remain unresolved, the AOC shall notify the VP- Patient Care Services/ Chief Nursing Officer (CNO), who can be reached

directly or via a Communication Specialist.

- f. In the event the VP-PCS/CNO is unavailable or unable to resolve the issue, the AOC or VP-PCS/CNO shall contact the VP of Medical Affairs and /or the President/CEO for resolution and/or guidance of the issue, who can be reached directly or via a Communication Specialist.

NOTE:

1. In the event the issue is with an immediate supervisor, a level of command may be passed over to the next level on the COC.
2. If at any point, in the escalation process, the employee feels the concern/need has not been resolved, they can request the next level in the COC process.

GUIDELINES FOR ISSUES WITH CREDENTIALLED MEDICAL PROVIDERS:

1. If an issue/conflict arises in a patient care area, between staff nurse and attending provider, direct communication by the staff nurse to the attending provider should take place first. This conflict should be discussed in a discrete area away from the patient's bedside.
 - a. Examples of when the COC may be utilized includes but is not limited to:
 - i. When provider orders are unclear (only after the ordering provider are asked for clarification.)
 - ii. In instances where a provider has not responded in a timely manner to a deteriorating patient condition. In this situation, timely is defined by the staff nurse based on patient status.
 - iii. When the nurse's assessment of the patient varies significantly from the provider's assessment.
 - iv. In situations where impairment of a provider is suspected.
 - v. In clinical situations where the nurse believes the provider has not responded in an appropriate manner to fully address the issues raised that may present an immediate risk to the patient.
2. If unable to be resolved, the staff member should follow the COC as written above. In addition,
 - a. Direct communication with attending provider should take place or contact should be made with the department chairperson.
 - b. If the conflict is with the department chairperson, the president of the medical staff or VP/medical staff affairs should be contacted by the AOC.
 - c. Chief of department communicates with the attending provider and communicates with staff member to resolve conflict.
 - d. Medical provider issues shall be handled in accordance with Medical Staff bylaws.
